SEARCH FOR ATOMIC ENERGY-ASSOCIATED FACILITY
NEAR MYSHANKA, USSR

25X1D

A scan of photography from [redacted] was made in an effort to determine if any atomic energy-associated installation could

be identified in or near the town of Myshanka, USSR (52-11N 028-56E) approximately 77 miles west of Gomel. Heavy cloud cover prevented observation of all but a small area southeast of the town. A study of this area reveals a probable military barracks area, located approximately one-half mile southeast of the town. (see figure).

The probable barracks area contains approximately 50 buildings, which appeared to be under construction.

25X1D

25X1D
VICINITY OF MYSHANKA, USSR. Cloud cover as indicated obscured photography of [redacted] area, although several new buildings appear to have been constructed within the limits of the old area.

reveal any expansion of the overall area, although several new buildings appear to have been constructed within

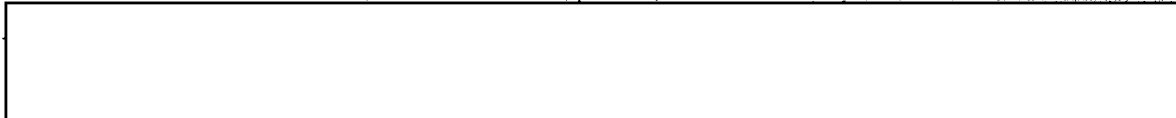

A collateral report placed an artillery division in a military camp near Myshanka in 1954 or 1955. 1/ The description of the camp generally agrees with what can be seen on the photography, although the camp does not appear large enough to house a division.

A six-gun antiaircraft artillery position can be seen approximately one-half mile north of the barracks area; its occupancy cannot be determined.
